Eco alternative pest control

- **Dipel** is non-toxic and provides organic protection from caterpillars in the moth and butterfly family. White cabbage butterflies, cabbage moth, loopers, budworms and vine moth caterpillars are some of the most common leaf-eating and flower spoiling pests that can be controlled with Dipel. When applied to food crops such as vegies, fruit and salad ingredients, they can be washed and eaten immediately after spraying as Dipel has no withholding period.

- **Natrasoap** controls mites, aphids, thrips, mealybug and whitefly on vegetables, fruit trees, ornamentals and pot plants.

- **eco-neem** is a broad spectrum, botanically based insecticide that controls sucking and chewing pests such as caterpillars and grass hoppers. eco-neem is safe to beneficial insects such as bees and lady beetles.

- **eco-oil** is made from Australian grown canola oil and enhanced with a blend of tea tree and eucalyptus oils, it controls a broad range of insects including scale, mites, aphids, white fly and citrus leaf miner.

- **eco-naturalure** controls both the Queensland fruit fly and the Mediterranean fruit fly and can be applied to fruit and foliage. eco-naturalure is used as a preventative spray and is designed to kill both male & female fruit flies before they attack fruit.

- **Pyrethrum Gun** is a low toxicity ready-to-use spray that kills insects while not entering the food chain or accumulating in the environment. Kills thrips, aphids, white fly, cabbage moth & larva, earwigs and leaf hoppers.

- **Garlic Gun** has the pungent smell of garlic that insects find especially unpleasant. The odour also masks the smells that pests use to find their preferred host. It is effective for small sucking insects such as aphids, most larvae including mosquito and looper caterpillar and slugs and snails.

Eco alternative fungicide

- **eco-fungicide & eco-rose** are fast acting organic fungicides made from food grade potassium bicarbonate. They control powdery mildew and black spot on grapevines, roses vegies and strawberries.

eco gardening promotes
healthy soil with more
organic materials.

Eco alternative plant food

- **Organic Xtra** is a premium blend of organic fertiliser pellets providing a balance of nutrients & essential trace elements required for healthy plant growth. It's particularly good for vegies, roses, palms, garden beds and fruit trees.

- **PowerFeed** is a liquid fertiliser containing macro nutrients, fish and liquid composts required for plant growth. It also contains liquid composts which help to improve soil structure. PowerFeed acts as a clay breaker and helps to reduce nutrient leaching in sandy soils.

- **Nitrosol** is a concentrated liquid plant food enriched with blood and bone to promote healthy plant growth. It is suitable for all indoor and outdoor plants including seedlings.

- **Organix Harvest** contains fish, fulvic acid, seaweed, trace elements and is great for all types of plants in your garden.

- **Blood & Bone** is ideal for gardens and lawns. It provides nitrogen for leaf growth and phosphorus for strong root development. Blood & Bone is suitable for all garden plants including native plants.
